Is your hotel ready for the BT Switch Off?

The UK's phone and broadband network is changing. BT have announced that they are planning to shut off their traditional PSTN and ISDN phone lines and swap all businesses to future-proof VoIP and SIP solutions. The scheduled end date of this project is January 2027 and is already well underway. New full fibre connections will soon enable faster, more reliable connectivity for everyone.

So, what does the BT PSTN and ISDN switch off mean for your hotel? In a nutshell, it means you'll need to update your telecoms and connectivity services but fear not...it's an exciting time. The future is in the cloud and the potential savings are significant and the benefits are huge!

With many of our clients incorporating migrating their technology stack into the Cloud as part of their sustainability strategy, our Digital Transformation experts are here to talk you through the changes. We can recommend the perfect VOIP and SIP solution for your hotel and ensure the switch is stress-free. Leaving you to focus on delivering first-class guest experience and great customer service.
